

TR50

POWERFUL COMPACT

Specification

Engine	Kohler 6 hp
Length	1570mm
Width	680mm
Height	800mm
Weight	135kg
Fuel Capacity	6.9L
Trench Depth	450mm
Trench Width	100 /120mm
Starter	Electric

TR50/6 Trencher

The TR 50/6 trencher facilitates trenching works at cables and lines laying in gardens, schools and parks without moving too much earth. The trench itself is up to 50 cm deep with a plain and clean unvaried profile given by the cutting chain width. The machine is used for trenching in compact soils with small stones in size up to 50 mm in one-man operation.

Loose soil is displaced by means of an auger aside from the trench which enables easy trench refilling. Compact design of the trencher, its engine power output and play of forces make its operation and control very easy.
